

**POCKETSPEC**

Technologies inc. <sup>SM</sup>

**POCKETSPEC** measuring **color** for the world

PocketSpec Technologies Inc. is the leader in the portable color measuring industry. With the advent of new technology, "PocketSpec" has developed a small, hand-held device that can read colors. It is a valuable tool that can be used to read and compare colors more accurately.

PocketSpec <sup>TM</sup> ColorQA is easy to use. Just place the tip against a colored surface you wish to match and push the button. The display shows three readings: one for red, one for green, and one for blue. This reading is your color's "signature" reading and your target to be matched. It is safely stored on your screen. You are now free to test any paint chip, color chart, or sample you wish. The screen will show the signature for each sample you select for comparison. By comparing the numbers of your target color and your sample color, you can decide which sample is the closest color match for your target.

ColorQA Series 3 and Series 4

**Are the superior choices for reading colors for color Comparison. They are inexpensive, small and extremely accurate.**

## USES

PocketSpec products are useful in any color sensitive industry. It is used where a quick, accurate color comparison is needed. Painters may match paints by reading the desired color on an immobile surface, like a wall, and then take the reading to match paint in any brand. Factory production of colored products such as plastics, cosmetics, etc. may be checked for the accuracy of likeness. With two clicks of the buttons: one click for the target color, one click on the color in question.
